

COVER LETTER

To: Hiring Team – Engineering & AI Innovation

Company: Hostinger

Role: Agentic Product Engineer | AI Builder (Remote)

Applicant: Moisés David Vera

Contact: moshequantum@gmail.com | multiversa.group | [LinkedIn](#)

Dear Hostinger Team,

Hostinger's relentless focus on speed, customer ownership, and democratizing the web through smart automation is reshaping how millions launch digital ideas. Building autonomous tools—such as AI website builders and intelligent hosting automation—requires more than just chaining LLM API calls: it demands an engineer who understands how users think, how complex interfaces manage real-time streaming states, and how autonomous agents reliably execute backend tools without breaking user trust.

I am applying for the **Agentic Product Engineer | AI Builder** role because I specialize in that exact intersection: **high-end Product Design Engineering combined with production-grade Agentic Orchestration**.

Over the past 16+ years, I have evolved from core design systems and frontend architecture (React, SvelteKit, TypeScript) into full-stack backend and agentic system engineering (Node.js, Go, Python, Cloudflare Workers, PostgreSQL). In my current role as Lead Design Engineer & Solutions Architect at Multiversa Group, I:

- 1. **Architected Agentic Workflows:** Built multi-agent execution loops with custom tool calling, context window optimization, and human-in-the-loop oversight to automate complex operational workflows.
- 2. **Crafted Streaming AI Interfaces:** Designed resilient, intuitive UI components capable of rendering token streams, tool-use states, and rollback mechanisms gracefully, turning non-deterministic AI outputs into seamless product experiences.
- 3. **Engineered Scalable Serverless Backends:** Implemented event-driven architectures with Cloudflare Workers and PostgreSQL, prioritizing ultra-low latency and deterministic execution boundaries.

Hostinger is known for its high-ownership, bias-for-action culture where developers act as autonomous problem-solvers rather than ticket-takers. Having worked across remote, asynchronous environments for years—backed by verified HackerRank certifications in Software Engineering, React, Problem Solving, and Advanced SQL—I thrive when given an outcome to achieve, the autonomy to architect the solution, and the responsibility to ship it cleanly.

I would welcome the opportunity to discuss how my combined product design sensibility and agentic engineering toolkit can help Hostinger accelerate its next generation of AI-driven products.

Thank you for your time and consideration.

Sincerely,

Moisés David Vera

Agentic Product Engineer & Senior Design Engineer
